

Experienced Software Engineer

Qliq is growing its trading activities and we are looking for a passionate and experienced Software Engineer to build and maintain our proprietary trading system with us.

Our trading and research infrastructure is built on in-house assembled hardware and is tailored to our current trading needs. Now we want to expand our business so we are recruiting someone that is able to leverage software engineering to boost our quant development.

Who we are

Qliq, part of the Qmulus family office, is a well-funded, new and tech-driven systematic quantitative trading firm. We trade derivatives in several asset classes in the US markets and are starting to expand to Europe. Our office is based in The Hague.

Our main area of expertise is quantitative trading on traditional asset classes in the low to mid-frequency range but we are very open-minded and promote all kinds of new inputs and initiatives from our team members. We have a scientific approach, guided by data and technology, and are passionate for clean code and simple well-architected systems. Qliq is all about the content.

What you'll do

As a software engineer at Qliq, you will get the opportunity to architect our trading infrastructure. We are seeking a motivated individual that can take ownership of our codebase, design production infrastructure, enhance the development lifecycle, and collaborate closely with our quant researchers and quant traders for the deployment of new trading strategies. Your responsibilities will comprise, but will not be bound to, the design, development, support, and maintenance of our trading systems, tools, and infrastructure.

What you'll need

- An academic degree in Computer Science, Computer Engineering or equivalent
- Affinity with the financial markets is a must
- Expert in C++ and Python
- Experience with trading systems
- Experience with (non)-relational databases, backtesting frameworks and financial data is a plus
- Knowledge of software design and development best practices
- Comfortable with Linux operating system
- An entrepreneurial team player
- The ability to work at least some days US hours

Benefits

- Base salary €80K - €130K based on experience
- A performance related bonus
- Responsibility of the codebase of an upcoming trading firm
- Your work having a direct impact
- A laptop and an allowance for a work phone
- Full reimbursement of travel expenses
- A pension scheme
- Potential ability to invest in in-house trading strategies
- Good work-life balance

Interested? Apply by sending your CV and motivation letter to qliq-hr@qmulus.nl.
